Abstract. Novel angiotensin converting enzyme (ACE) inhibitors were designed based on the structure of commercially available sartans and synthesized by N-alkylation of 5-substituted-1H-tetrazole with 4'-(bromomethyl)-biphenyl-2-carbonitrile gave 1,5- and 2,5- regioisomers of tetrazole. The nitrile group appended to biphenyl nucleus was converted into tetrazole and later the tetrazole was ring transformed into 1,3,4-oxadiazole. The synthesized compounds were screened for the ACE inhibition and some of the compounds exhibited significant results.

Keywords: Biphenyl, tetrazole, N-alkylation, regioisomers, 1,3,4-Oxadiazole, ring transformation, ACE inhibition

1 Introduction

All the cardiovascular diseases in the present era are caused mainly by “lifestyle disorder”, a term coined to redefine hypertension. Although the causes of cardiovascular disease are many, hypertension stands to be the crucial one. A recent study suggests that hypertensive patients are more prone to develop type II diabetes [1]. Thus, these chronic diseases coexist, with increasing risk of coronary artery disease, kidney damage, vision problems, enlarging of heart, stroke and heart failure. Many drugs have been developed to treat such chronic diseases with reduced risk of side effects. Thus, the efficacy of hypertensive medications involves many etiologies and disease mechanisms to treat the hypertensive related chronic disease [2].

The first line therapy for the treatment of hypertension is angiotensin converting enzyme (ACE) inhibitors and angiotensin II receptor blockers. The biphenyl-tetrazole is the key substrate [3-5], which belongs to a group of angiotensin II-receptor antagonists generally referred to as “sartans”. These include Losartan, Valsartan and Candesartan which are useful in the treatment of hypertension, heart diseases, and bladder diseases and work by blocking the action of angiotensin II on its receptor (Figure 1). Tetrazole is a heterocyclic moiety that functions as a carboxylic acid bioisostere with greater metabolic stability. It forms two hydrogen bonds with peptide residues in a biological target site which facilitates the binding interaction [6]. The negative charge of the tetrazolic anion is delocalized over all four nitrogens which play a major role in the clog P value and thus resulting in better oral bioavailability and cell penetration. It also exhibits many biological activities like antihypertensive [7,8], anti-inflammatory [9], endocannabinoid metabolism inhibitor, antibiotic [10] and anticonvulsant [11]. 1,3,4-Oxadiazole is a biologically active nucleus which shows a broad spectrum of pharmacological activities such as antimicrobial [12], antiprotozoal [13], anti-inflammatory [14], anti-tubercular [15] etc. Thus, the combination of two biological active moieties enhances the biological activities of the novel template.

Considering all the above observations, we intended to synthesize novel scaffolds by N-alkylation of 5-substituted-1H-tetrazole 2a-d with 4'-(bromomethyl)-biphenyl-2-carbonitrile 1, there by affording two tetrazole regioisomers. Both the separated isomers 3a-d and 4a-d containing a nitrile group were converted into the corresponding tetrazole derivatives (5a-d and 6a-d). These were further ring transformed into 1,3,4-oxadiazoles 7a-d and 8a-d respectively in presence of acetic anhydride as shown in Scheme 1. All titled compounds were also subjected to the *in vitro* ACE inhibitions assay.

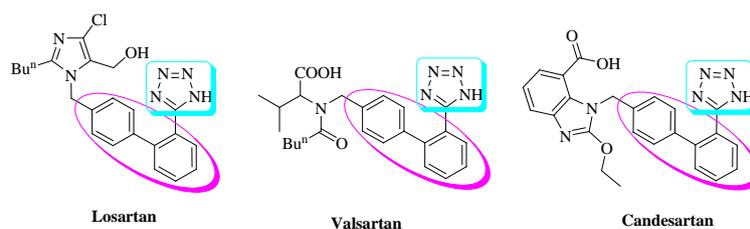

Figure 1. Structure of some angiotensin receptor blockers (ARB) containing biphenyl-tetrazole moiety

2 Results and Discussion

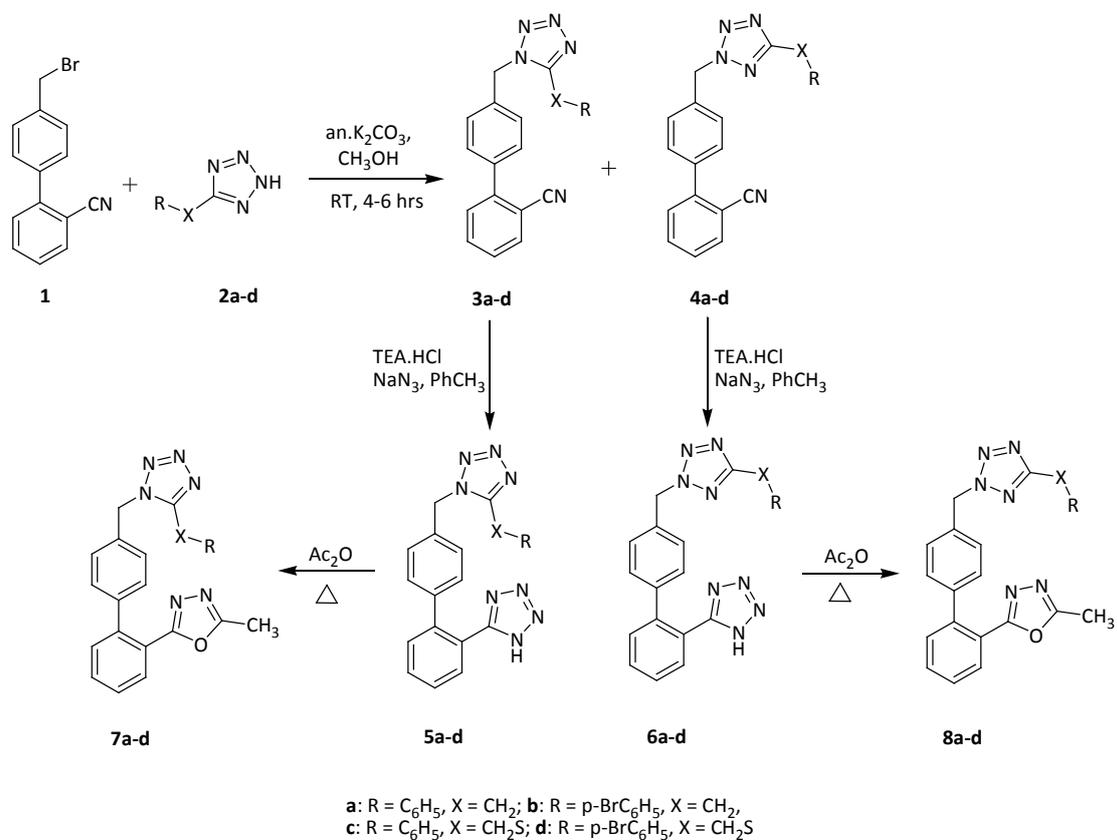

2.1 Chemistry

The *N*-alkylation of benzyl tetrazole 2a-d with 4-bromomethylbiphenyl-2-carbonitrile 1 in presence of anhydrous K_2CO_3 afforded regioisomers *viz.* 1,5-disubstituted 3a-d and 2,5-disubstituted tetrazoles 4a-d. The two regioisomers have been successfully separated by column chromatography using hexane and ethyl acetate (9:1) as eluent. Further, each isomer was reacted with sodium azide and triethyl amine hydrochloride (TEA.HCl) in toluene to provide the corresponding tetrazole derivatives 5a-d and 6a-d. Ring transformation occurred when the tetrazole derivatives 5a-d and 6a-d were treated with acetic anhydride to yield 1,3,4-oxadiazole derivatives 7a-d and 8a-d respectively. The proposed mechanism of ring transformation of tetrazole to 1,3,4-oxadiazole [16] is shown in Scheme 2.

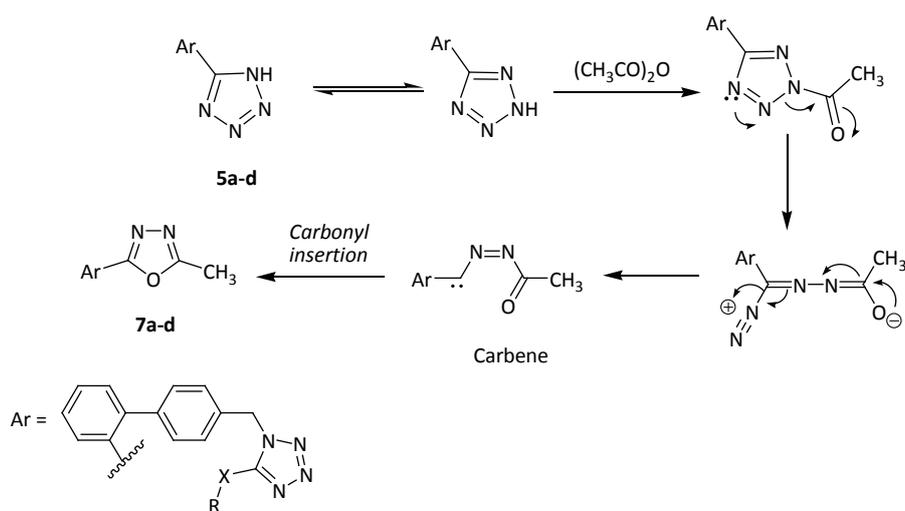

All the final compounds were characterized by FT-IR, 1H & ^{13}C NMR, GC-MS and elemental analysis. In case of IR studies, compounds 3a-d and 4a-d have shown a sharp band around $2220-2238\text{ cm}^{-1}$ for a nitrile group. In 1H NMR, the methyl protons of 1,3,4-oxadiazole derivatives 7a-d and 8a-d resonated as singlet in the range δ 2.20-2.35 ppm. All the compounds have shown two singlets in the range δ 4.20-4.30 ppm and δ 5.35-5.83 ppm for methylene protons. The aromatic protons of all the title compounds showed signals around δ 7.21-8.01 ppm. The methylene group in the regioisomers 3a-d/4a-d, 5a-d/6a-d and 7a-d/8a-d flanked between biphenyl group and tetrazole were distinguished based upon their chemical shifts. In case of 3a-d, 5a-d and 4-d, 7a-d, the singlet for this methylene group was upfield relative to those in 6a-d and 8a-d respectively where the chemical shift was downfield. For example, in case of the compounds 3a-d these methylene protons were resonated in the range 5.35-5.42 ppm whereas in case of their regioisomers 4a-d these methylene protons have appeared as a singlet in the range 5.80-5.86 ppm. Similar observation is made in case of the title compounds 5a-d/6a-d and 7a-d/8a-d respectively. In ^{13}C NMR spectroscopic analyses all the compounds have shown signals which are consistent with the number of magnetically nonequivalent carbon atoms. The mass spectroscopic studies showed the molecular ion peaks at their respective m/z values.

2.2 Single Crystal X-ray Analysis

Single crystals of 5-{4'-[(5-benzyl-2*H*-tetrazol-2-yl)methyl] biphenyl-2-yl}-1*H*-tetrazole monohydrate 6a were obtained using dry acetone by slow evaporation at room temperature and crystalline state is characterized by a long range, well defined three dimensional orders. The asymmetric unit of 5-{4'-[(5-benzyl-2*H*-tetrazol-2-yl) methyl] biphenyl -2-yl}-1*H*-tetrazole is shown in Figure 2. The dihedral angle between the tetrazole (C6/N2/N3-N5, C23/C24/N25-N27) rings is $69.58(1)^\circ$ while the terminal phenyl ring (C8-C13) has dihedral angles of $26.98(8)^\circ$ and $39.75(8)^\circ$ with the other benzene rings (C15-C20 & C21/C22/C28/C29-C31). The dihedral angle for biphenyl (C15-C20 & C21\C22\C28\ . . . C31 is $55.23(8)^\circ$. In the crystal, the solvent water molecule is linked to the main molecule via N27-H12 . . . O1 and O1- H11 . . . N27 hydrogen bonds. In addition, there is intermolecular C7-H71 . . . N25 hydrogen. The structure contains π - π , with a centroid-centroid (Cg (1), C6/N2/N3-N5) and (Cg (2), C23/24/N25-N27) distance of 3.6556 (9) Å and 3.826 (1) Å respectively and also C-H . . . π interactions. In the structure, all bond lengths and angles are within normal ranges. Crystal Packing diagram is shown in Figure 3.

2.3 In Vitro ACE Inhibition

The ultimate action of an angiotensin converting enzyme (ACE) inhibitor is to relax the blood vessels and lower blood pressure. ACE inhibitors block the conversion of angiotensin I to angiotensin II enzyme and thereby also inhibit the formation of angiotensin II that occurs in the kidney, blood vessels, heart, brain and adrenal glands. ACE inhibitors decrease the activity of the renin-angiotensin-aldosterone system (RAAS) which controls the variations in the blood pressure. RAAS also produces a protein named renin which is released from the kidneys, which in turn produces angiotensin that induces the adrenal gland to produce aldosterone. Aldosterone checks the balance of the reabsorption of water and conservation of sodium, with the increase in water retention and blood pressure in human body. Angiotensin II increases blood pressure by its action as a vasoconstrictive substance and steadily stimulates the secretion of aldosterone. Thus, ACE is the primary target for tackling hypertension which results in increasing cardiac output, cardiac index, stroke work, and lowering the renovascular resistance [17,18]. Therefore, in the present work we have made an attempt to design and synthesize the tetrazole and 1,3,4-oxadiazole derivatives of biphenyl which are the structural analogs of angiotensin II receptor antagonists (sartans) and assay for their inhibitory action of ACE.

Since these biphenyls 5a-d and 6a-d are the structural analogs of sartans, we have carried out the inhibition assay against ACE. It was observed that the compounds 6a-d exhibited good inhibition usually at higher concentration. In particular, the compound 6c with the phenyl sulfanyl moiety has

shown very good inhibition at 1µg *i.e.*, 90%. However at 5µg and 10µg concentration the inhibition plateaus at 95%. Compounds 5a-d showed moderate inhibition whereas the ring transformed compounds 7a-d and 8a-d are not active against the ACE. Hence, it can be concluded that tetrazole ring attached directly to biphenyl carbon is a requirement to possess activity (Table 1 and 2).

Table 1. Antihypertensive activity of 5a-d and 6a-d

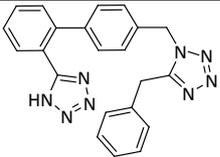

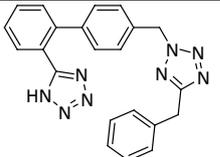

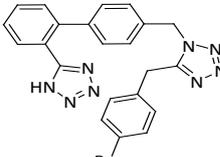

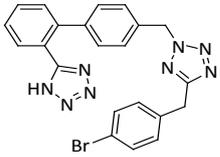

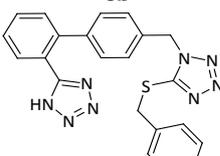

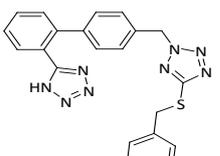

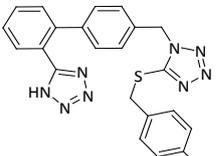

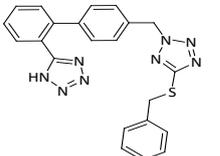

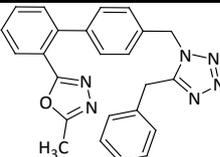

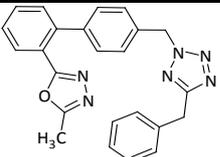

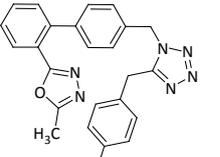

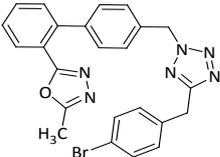

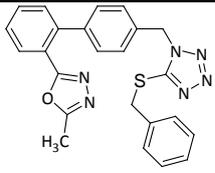

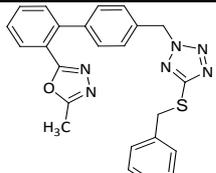

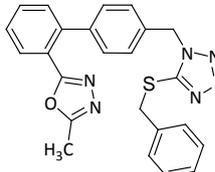

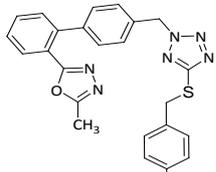

Samples	Concentration (µg)	Inhibition (%)	Samples	Concentration (µg)	Inhibition (%)
 5a	10	50	 6a	10	76

3 Conclusions

From the above study, we reported the design and efficient synthesis of 5a-d/6a-d and further ring transformation into 7a-d/8a-d *i.e.*, tetrazole to 1,3,4-oxadiazole ring. Diverse, albeit small libraries of these compounds were evaluated for the inhibition of ACE enzyme. From the *in vitro* results, it was found that some of the tetrazole derivatives 5b, 5c, and 5d inhibited the ACE enzyme very effectively. Compounds 6c and 6d showed the inhibition of around 90% in comparison to the control. It is interesting to note that the 1,3,4-oxadiazole derivatives 7a-d/8a-d showed negligible activity against both the enzymes. Thus tetrazole derivatives of biphenyl 6c and 6d can serve as lead targets for ACE inhibition in future.

4 Experimental

4.1 General Procedure for the Synthesis of 4'-[(5-Aryl/Arylsulfanyl-Tetrazol) Methyl] Biphenyl-2-Carbonitrile (3a-d/4a-d)

4-Bromomethylbiphenyl-2-carbonitrile (**1**, 0.01M), benzytetrazole (2a-d, 0.01M), anhydrous potassium carbonate (0.01M) and methanol (10ml) were stirred in round bottom flask for 6-8 h at room temperature. The completion of reaction was monitored by TLC. The reaction mixture was quenched in ice cold water and the solid obtained was filtered and dried. The two regioisomers were successfully separated by column chromatography using hexane ethyl acetate (9:1) mixture as eluent.

4.1.1 4'-[(5-Benzyl-1H-tetrazol-1-yl) methyl] biphenyl-2-carbonitrile (3a)

Pale yellow solid, mp.: 75-77°C; IR (KBr, cm^{-1}): 2229 (CN); ^1H NMR (300 MHz, CDCl_3 , δ ppm): 7.17-7.78 (13H, m, Ar-H), 5.42 (2H, s, biphenyl CH_2), 4.21 (2H, s, CH_2); ^{13}C NMR (75 MHz, CDCl_3 , δ ppm) 154.22, 148.80, 145.28, 137.90, 135.09, 135.90, 133.90, 132.90, 132.45, 132.09, 131.00, 129.32, 127.83, 120.88, 116.99, 114.88, 47.23, 33.47; MS (m/z, 70 eV): 351 (M^+), 341, 295, 204, 192, 165, 91, 83; Analysis for $\text{C}_{22}\text{H}_{17}\text{N}_5$, Calculated: C 75.19, H 4.88, N 19.93. Found: C 75.25, H 4.96, N 20.05.

4.1.2 4'-[5-(4-Bromobenzyl)-1H-tetrazol-1-yl]methyl}biphenyl-2-carbonitrile (3b)

Pale yellow solid, mp.: 86-87°C; IR (KBr, cm^{-1}): 2232 (CN); ^1H NMR (300 MHz, CDCl_3 , δ ppm): 7.10-7.79 (12H, m, Ar-H), 5.37 (2H, s, biphenyl CH_2), 4.19 (2H, s, CH_2); ^{13}C NMR (75 MHz, CDCl_3 , δ ppm): 149.80, 145.28, 137.90, 135.90, 135.09, 133.90, 132.45, 132.09, 129.32, 127.83, 127.10, 126.58, 125.32, 120.88, 117.00, 114.38, 47.53, 33.87; MS (m/z, 70 eV): 431 (M^{++2}), 429 (M^+), 379, 351, 249, 192, 165, 139, 111, 85, 57; Analysis for $\text{C}_{22}\text{H}_{16}\text{N}_5\text{Br}$, Calculated: C 61.41, H 3.75, N 16.28. Found: C 61.49, H 3.86, N 16.36.

4.1.3 4'-[5-(Benzylsulfanyl)-1H-tetrazol-1-yl]methyl}biphenyl-2-carbonitrile (3c)

Pale yellow solid, mp.: 78-80 C; IR (KBr, cm^{-1}) 2222 (CN); ^1H NMR (300 MHz, CDCl_3 , δ ppm): 7.27-7.75 (13H, m, Ar-H), 5.36 (2H, s, biphenyl CH_2), 5.25 (2H, s, CH_2); ^{13}C NMR (75 MHz, CDCl_3 , δ ppm): 154.36, 145.38, 132.86, 132.00, 131.02, 130.00, 129.84, 129.00, 128.74, 128.49, 127.66, 127.01, 126.03,

125.23, 119.32, 113.87, 48.61, 34.78; MS (m/z , 70 eV): 383 (M^+), 204, 192, 177, 165, 117, 91, 83, 65, 40; Analysis for $C_{22}H_{17}N_5S$, Calculated: C 68.91, H 4.47, N 18.26. Found: C 68.96, H 4.54, N 18.34.

4.1.4 4'-([5-[(4-Bromobenzyl)sulfanyl]-1*H*-tetrazol-1-yl]methyl)biphenyl-2-carbonitrile (3d)

Light brown solid, mp.: 130-32°C; IR (KBr, cm^{-1}): 2226 (CN); 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.27-7.85 (12H, m, Ar-H), 5.34 (2H, s, biphenyl CH_2), 5.21 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ ppm): 153.68, 145.20, 137.81, 135.07, 133.94, 132.80, 132.03, 130.99, 129.00, 128.50, 127.73, 126.25, 125.36, 122.36, 116.86, 113.87, 47.61, 37.86; MS (m/z , 70 eV): 463 ($M^+ + 2$), 461 (M^+), 390, 341, 295, 281, 211, 193, 180, 165, 91, 65; Analysis for $C_{22}H_{16}N_5BrS$, Calculated: C 57.15, H 3.49, N 15.15. Found: C 57.21, H 3.59, N 15.21.

4.1.5 4'-[(5-Benzyl-2*H*-tetrazol-2-yl)methyl]biphenyl-2-carbonitrile (4a)

White solid, mp.: 72-74°C; IR (KBr, cm^{-1}): 2224 (CN); 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.22-7.65 (13H, m, Ar-H), 5.81 (2H, s, biphenyl CH_2), 4.22 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ ppm): 153.54, 145.27, 137.32, 136.30, 135.86, 135.40, 132.85, 132.30, 129.75, 128.82, 128.72, 127.81, 126.80, 125.42, 124.80, 116.88, 48.33, 34.88; MS (m/z , 70 eV): 351, 341, 295, 204, 192, 165, 91, 65; Analysis for $C_{22}H_{17}N_5$, Calculated: C 75.19, H 4.88, N 19.93. Found: C 75.28, H 4.97, N 20.04.

4.1.6 4'-{[5-(4-Bromobenzyl)-2*H*-tetrazol-2-yl]methyl}biphenyl-2-carbonitrile (4b)

Light brown solid, mp.: 128-30°C; IR (KBr, cm^{-1}): 2235 (CN); 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.27-7.87 (12H, m, Ar-H), 5.80 (2H, s, biphenyl CH_2), 4.20 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ ppm): 153.30, 145.30, 136.30, 135.70, 134.40, 132.90, 132.40, 131.80, 129.38, 128.90, 128.05, 127.71, 126.56, 125.46, 119.80, 114.80, 48.33, 34.85; MS (m/z , 70 eV): 431 ($M^+ + 2$), 429 (M^+), 322, 289, 235, 192, 165, 91, 65; Analysis for $C_{22}H_{16}N_5Br$, C 61.41, H 3.75, N 16.28. Found: C 61.48, H 3.86, N 16.37.

4.1.7 4'-{[5-(Benzylsulfanyl)-2*H*-tetrazol-2-yl]methyl}biphenyl-2-carbonitrile (4c)

Pale yellow powder, mp.: 68-70°C; IR (KBr, cm^{-1}): 2238 (CN); 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.25-7.68 (13H, m, Ar-H), 5.83 (2H, s, biphenyl CH_2), 4.58 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ ppm): 154.22, 146.17, 137.85, 136.80, 135.80, 132.56, 132.47, 130.90, 129.42, 128.99, 128.87, 128.49, 127.78, 126.33, 116.87, 113.87, 47.50, 38.08; MS (m/z , 70 eV): 383, 204, 192, 177, 165, 117, 91, 83, 65, 40; Analysis for $C_{22}H_{17}N_5S$, Calculated: C 68.91, H 4.47, N 18.26. Found: C 69.06, H 4.54, N 18.34.

4.1.8 4'-([5-[(4-Bromobenzyl)sulfanyl]-2*H*-tetrazol-2-yl]methyl)biphenyl-2-carbonitrile (4d)

Light brown solid, mp.: 110-12°C; IR (KBr, cm^{-1}): 2229 (CN); 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.15-7.68 (12H, m, Ar-H), 5.86 (2H, biphenyl CH_2), 4.59 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ ppm): 150.00, 145.25, 137.50, 135.80, 134.00, 132.80, 132.03, 130.98, 128.82, 127.73, 127.73, 126.54, 125.47, 122.36, 116.90, 115.10, 48.21, 37.89; MS (m/z , 70 eV): 462, 341, 295, 281, 211, 193, 165, 152, 103, 91, 65; Analysis for $C_{22}H_{16}N_5BrS$, Calculated: C 57.15, H 3.49, N 15.15. Found: C 57.21, H 3.58, N 15.26.

4.2 General Procedure for the Synthesis of 5-(Aryl/Arylsulfanyl)-1-{2'-(1*H*-Tetrazol-5-yl) Biphenyl-4-yl] Methyl}-1*H*-Tetrazole (5a-d)

A mixture of 4'-[(5-aryl/aryl-sulfanyl-1*H*-tetrazol-1-yl)methyl]biphenyl-2-carbonitrile 3a-d, (0.01 M), sodium azide (0.04 M) and triethylamine hydrochloride (TEA, 0.04 M) in toluene (20 ml) was stirred at 105-110°C for 48 h. After completion of reaction, the reaction mixture was cooled to room temperature and extracted with 10% sodium hydroxide solution (20 ml) and water. The aqueous layer was collected and dil. hydrochloric acid is added until acidic. The solid separated was filtered, dried and recrystallized using ethanol.

A similar procedure was followed to prepare 5-{4'-[(5-aryl/arylsulfanyl)-2*H*-tetrazol-2-yl] methyl} biphenyl-2-yl]-1*H*-tetrazole (6a-d) from 4'-[(5-aryl/arylsulfanyl)-2*H*-tetrazol-2-yl] methyl} biphenyl-2-carbonitrile (4a-d).

4.2.1 5-Benzyl-1-{2'-(1*H*-tetrazol-5-yl) biphenyl-4-yl]methyl}-1*H*-tetrazole (5a)

Pale yellow solid, mp.: 141-43°C; IR (KBr, cm^{-1}): 1619, 1556; 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.23-7.68 (13H, m, Ar-H), 5.41 (2H, s, biphenyl CH_2), 4.20 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ ppm): 150.00, 148.53, 137.90, 135.79, 131.00, 130.94, 129.42, 129.00, 128.50, 128.30, 128.00, 127.16, 126.82, 126.70, 125.00, 120.01, 48.11, 34.01; MS (m/z , 70 eV): 394, 351, 289, 235, 192, 178, 165, 152, 91, 44; Analysis for $C_{22}H_{18}N_8$, Calculated: C 66.99, H 4.60, N 28.41. Found: C 67.03, H 4.72, N 28.52.

4.2.2 5-(4-Bromobenzyl)-1-{2'-(1*H*-tetrazol-5-yl) biphenyl-4-yl]methyl}-1*H*-tetrazole (5b)

Pale yellow solid, mp.: 186-88°C; IR (KBr, cm^{-1}): 1617, 1456; 1H NMR (300 MHz, $CDCl_3$, δ ppm): 7.21-7.93 (12H, m, Ar-H), 5.30 (2H, s, biphenyl CH_2), 4.19 (2H, s, CH_2); ^{13}C NMR (75 MHz, $CDCl_3$, δ

ppm): 150.99, 148.50, 139.00, 138.09, 137.90, 135.28, 134.30, 132.10, 131.00, 129.54, 128.99, 128.50, 127.66, 127.03, 122.88, 116.50, 47.99, 33.99; MS (m/z, 70 eV): 474 (M⁺+2), 472 (M⁺), 322, 289, 207, 192, 178, 165, 91, 44; Analysis for C₂₂H₁₇N₈Br, Calculated: C 55.83, H 3.62, N 23.62. Found: C 55.96, H 3.70, N 23.68.

4.2.3 5-(Benzylsulfanyl)-1-{[2'-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl}-1*H*-tetrazole (5c)

Off white solid, mp.: 140-43°C; IR (KBr, cm⁻¹) 1621, 1448; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.22-7.73 (13H, m, Ar-H), 5.37 (2H, s, biphenyl CH₂), 4.52 (2H, s, CH₂); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 151.29, 149.17, 137.85, 136.80, 135.99, 135.80, 132.34, 132.40, 130.90, 129.42, 128.99, 128.87, 128.49, 127.68, 126.88, 118.87, 47.50, 38.08; MS (m/z, 70 eV): 426, 210, 192, 176, 165, 93, 48; Analysis for C₂₂H₁₈N₈S, Calculated: C 61.95, H 4.25, N 36.25. Found: C 62.04, H 4.31, N 26.34.

4.2.4 5-[(4-Bromobenzyl)sulfanyl]-1-{[2'-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl}-1*H*-tetrazole (5d)

Pale yellow solid, mp.: 134-36°C; IR (KBr, cm⁻¹): 1618, 1458; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.27-7.83 (12H, m, Ar-H), 5.38 (2H, s, biphenyl CH₂), 4.52 (2H, s, CH₂); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 152.00, 150.23, 136.48, 135.89, 135.53, 133.99, 132.50, 132.00, 130.98, 130.00, 129.62, 128.40, 127.60, 126.80, 126.00, 122.40, 48.02, 37.53; MS (m/z, 70 eV): 506 (M⁺+2), 504 (M⁺), 379, 351, 249, 208, 192, 165, 111, 85, 57; Analysis for C₂₂H₁₇N₈BrS, Calculated: C 52.28, H 3.39, N 22.17. Found: C 52.36, H 3.45, N 22.26.

4.2.5 5-{4'-[(5-Benzyl-2*H*-tetrazol-2-yl)methyl]biphenyl-2-yl}-1*H*-tetrazole (6a)

Pale yellow solid, mp.: 212-14°C; IR (KBr, cm⁻¹): 1622, 1488; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.25-7.85 (13H, m, Ar-H), 5.62 (2H, s, biphenyl CH₂), 4.20 (2H, s, CH₂); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 153.32, 145.60, 136.44, 135.86, 137.00, 135.38, 132.99, 132.38, 129.78, 128.90, 127.82, 127.00, 126.84, 126.03, 116.78, 115.68, 48.45, 34.72; MS (m/z, 70 eV): 394, 351, 289, 235, 192, 178, 165, 152, 91, 77; Analysis for C₂₂H₁₈N₈, Calculated: C 66.99, H 4.60, N 28.41. Found: C 67.08, H 4.74, N 28.52.

4.2.6 5-(4'-[[5-(4-Bromobenzyl)-2*H*-tetrazol-2-yl]methyl]biphenyl-2-yl)-1*H*-tetrazole (6b)

White solid, mp.: 158-60°C; IR (KBr, cm⁻¹): 1614, 1456; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.26-7.89 (12H, m, Ar-H), 5.63 (2H, s, biphenyl CH₂), 4.21 (2H, s, CH₂); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 153.33, 150.30, 137.21, 136.33, 135.80, 134.45, 133.01, 132.55, 132.03, 131.80, 131.02, 129.40, 128.85, 128.31, 125.97, 120.10, 48.36, 34.99; MS (m/z, 70 eV): 474 (M⁺+2), 472 (M⁺), 396, 273, 206, 193, 165, 96, 42; Analysis for C₂₂H₁₇N₈Br, Calculated: C 55.83, H 3.62, N 23.62. Found: C 55.9, H 3.72, N 23.69.

4.2.7 5-(4'-[[5-(Benzylsulfanyl)-2*H*-tetrazol-2-yl]methyl]biphenyl-2-yl)-1*H*-tetrazole (6c)

Pale yellow solid, mp.: 131-33°C; IR (KBr, cm⁻¹): 1616, 1457; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.22-7.80 (13H, m, Ar-H), 5.40 (2H, s, biphenyl CH₂), 4.25 (2H, s, CH₂), biphenyl CH₂, 4.22 (2H, s, CH₂); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 154.22, 146.17, 137.85, 136.80, 135.80, 132.45, 132.40, 130.90, 129.42, 128.87, 128.01, 127.68, 126.12, 125.87, 116.87, 113.87, 47.50, 38.08; MS (m/z, 70 eV): 426, 204, 192, 177, 165, 91, 83; Analysis for C₂₂H₁₈N₈S, Calculated: C 61.95, H 4.25, N 36.25. Found: C 62.04, H 4.36, N 26.29.

4.2.8 5-[4'-[[5-[(4-Bromobenzyl)sulfanyl]-2*H*-tetrazol-2-yl]methyl]biphenyl-2-yl]-1*H*-tetrazole (6d)

Pale yellow solid, mp.: 154-56°C; IR (KBr, cm⁻¹): 1617, 1461; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.29-7.88 (12H, m, Ar-H), 5.90 (2H, s, biphenyl CH₂), 4.23 (2H, s, CH₂); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 152.00, 150.23, 137.51, 136.48, 135.89, 135.53, 133.99, 132.00, 130.98, 128.99, 128.40, 127.40, 127.00, 126.85, 126.00, 122.40, 48.22, 37.72; MS (m/z, 70 eV): 506 (M⁺+2), 504 (M⁺), 379, 351, 249, 208, 192, 165, 111, 85, 57; Analysis for C₂₂H₁₇N₈BrS, Calculated: C 52.28, H 3.39, N 22.17. Found: C 52.35, H 3.46, N 22.28.

4.3 General Procedure for the Synthesis of 5-(Aryl/Arylsulfanyl)-{[2'-(5-Methyl-1,3,4-Oxadiazol-2-yl)Biphenyl-4-yl]Methyl}-1*H*-Tetrazole (7a-d)

5-(Aryl/arylsulfanyl)-1-{[2'-(1*H*-tetrazol-5-yl) biphenyl-4-yl] methyl}-1*H*-tetrazole 5a-d, 1.00gm) was heated with acetic anhydride (10 ml) on a water bath for 2 h. The reaction was monitored by TLC using hexane/ethyl acetate. Then the reaction mixture was poured into ice cold water. The solid separated was filtered, washed with water and dried. Recrystallization was carried using ethanol. Similarly, 5-aryl/arylsulfanyl -{[2'-(5 methyl-1,3,4 -oxadiazole-2-yl) biphenyl-4-yl] methyl}-2*H*-tetrazole 8a-d was synthesized from 5-{4'-[(5-aryl/arylsulfanyl)-2*H*-tetrazol-2-yl]methyl]biphenyl-2-yl}-1*H*-

tetrazole 6a-d.

4.3.1 5-Benzyl-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-1*H*-tetrazole (7a)

Pale yellow solid, mp: 131-33°C; IR (KBr, cm⁻¹): 1616, 1457; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.22-7.80 (13H, m, Ar-H), 5.40 (2H, s, biphenyl CH₂), 4.25 (2H, s, CH₂), 2.34 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 164.54, 159.90, 148.60, 139.89, 137.69, 135.70, 132.29, 130.90, 130.79, 129.40, 128.97, 128.50, 127.76, 127.47, 126.39, 125.00, 119.66, 47.99, 33.39, 15.01; MS (m/z, 70 eV): 408, 392, 351, 249, 192, 165, 139, 71, 43; Analysis for C₂₄H₂₀N₆O, Calculated: C 70.57, H 4.94, N 20.58. Found: C 70.67, H 5.04, N 20.64.

4.3.2 5-(4-Bromobenzyl)-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-1*H*-tetrazole (7b)

Pale yellow solid, mp.: 165-67°C; IR (KBr, cm⁻¹): 1623, 1499; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.15-7.99 (12H, m, Ar-H); 5.40 (2H, s, biphenyl CH₂), 4.25 (2H, s, CH₂), 2.35 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 164.80, 160.88, 145.66, 139.40, 138.00, 137.50, 135.80, 133.23, 133.00, 134.25, 132.10, 131.20, 128.55, 127.03, 126.85, 125.66, 122.08, 48.02, 34.09, 15.23; MS (m/z, 70 eV): 488 (M⁺+2), 486 (M⁺), 382, 235, 205, 192, 165, 91, 65; Analysis for C₂₄H₁₉N₆BrO, Calculated: C 59.19, H 3.93, N 17.24. Found: C 59.26, H 4.05, N 17.38.

4.3.3 5-(Benzylsulfanyl)-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-1*H*-tetrazole (7c)

Yellow solid, mp.: 88-90°C; IR (KBr, cm⁻¹): 1620, 1485; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.08-7.80 (13H, m, Ar-H), 5.35 (2H, s, biphenyl CH₂), 4.45 (2H, s, CH₂), 2.25 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 163.60, 159.90, 153.59, 139.22, 137.30, 136.80, 135.76, 132.99, 132.30, 130.80, 130.00, 129.31, 128.88, 128.48, 127.75, 127.58, 126.68, 48.68, 37.88, 16.02; MS (m/z, 70 eV): 440, 426, 379, 249, 192, 165, 85, 43; Analysis for C₂₄H₂₀N₆SO, Calculated: C 65.44, H 4.58, N 19.08. Found: C 65.57, H 4.64, N 19.18.

4.3.4 5-[4-(Bromobenzyl)-sulfanyl]-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-1*H*-tetrazole (7d)

Pale yellow solid, mp.: 127-29°C; IR (KBr, cm⁻¹): 1619, 1466; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.03-7.60 (12H, m, Ar-H), 5.25 (2H, s, biphenyl CH₂), 4.15 (2H, s, CH₂), 2.15 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 169.80, 163.60, 159.94, 139.50, 137.01, 135.79, 133.94, 132.11, 131.03, 130.74, 128.82, 128.62, 128.03, 127.76, 126.69, 126.39, 125.36, 48.00, 38.03, 15.00; MS (m/z, 70 eV): 520 (M⁺+2), 518 (M⁺), 426, 379, 351, 249, 192, 165, 111, 85, 71; Analysis for C₂₄H₁₉N₆BrSO, Calculated: C 55.50, H 3.69, N 16.18. Found: C 55.58, H 3.76, N 16.25.

4.3.5 5-Benzyl-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-2*H*-tetrazole (8a)

Pale yellow solid, mp.: 65-70°C; IR (KBr, cm⁻¹) 1616, 1559; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.27-7.68 (13H, m, Ar-H), 5.91 (2H, s, biphenyl CH₂), 4.23 (2H, s, CH₂), 2.24 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 164.60, 159.94, 148.60, 139.99, 137.70, 135.69, 132.29, 131.00, 130.79, 129.38, 128.97, 128.50, 127.76, 127.47, 126.39, 125.59, 120.89, 47.97, 33.96, 16.00; MS (m/z, 70 eV): 408, 396, 351, 273, 246, 206, 193, 177, 96, 42; Analysis for C₂₄H₂₀N₆O, Calculated: C 70.57, H 4.94, N 20.58. Found: C 70.56, H 4.95, N 20.57.

4.3.6 5-(4-Bromobenzyl)-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-2*H*-tetrazole (8b)

Pale yellow solid, mp.: 138-40°C; IR (KBr, cm⁻¹): 1622, 1552; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.24-7.68 (12H, m, Ar-H), 5.91 (2H, s, biphenyl, CH₂), 4.23 (2H, s, CH₂), 2.37 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 164.36, 159.94, 138.01, 137.80, 137.00, 134.20, 133.60, 132.64, 132.12, 131.79, 129.32, 128.82, 128.62, 127.32, 126.69, 125.33, 119.74, 49.02, 34.67, 15.04; MS (m/z, 70 eV): 488 (M⁺+2), 486 (M⁺), 322, 289, 207, 192, 165, 91, 64; Analysis for C₂₄H₁₉N₆BrO, Calculated: C 59.19, H 3.93, N 17.24. Found: C 59.28, H 4.06, N 17.32.

4.3.7 5-(Benzylsulfanyl)-{[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl}-2*H*-tetrazole (8c)

Yellow solid, mp.: 88-90°C; IR (KBr, cm⁻¹): 1669, 1552; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.08-7.80 (13H, m, Ar-H) 5.91(2H, s, biphenyl CH₂), 4.45 (2H, s, CH₂), 2.25 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 163.60, 159.94, 148.60, 139.99, 139.01, 137.70, 135.79, 132.29, 130.90, 130.79, 129.88, 129.38, 128.97, 128.62, 127.76, 126.31, 125.63, 48.09, 38.39, 16.03; MS (m/z, 70 eV): 440, 418, 410, 192, 175, 165, 95, 48; Analysis for C₂₄H₂₀N₆SO, Calculated: C 65.44, H 4.58, N 19.08. Found: C 65.52, H 4.62, N 19.14.

4.3.8 5-[4-(Bromobenzyl)sulfanyl]-[2'-(5-methyl-1,3,4-oxadiazol-2-yl)biphenyl-4-yl]methyl]-2*H*-tetrazole (8d)

Pale yellow solid, mp.: 127-29°C; IR (KBr, cm⁻¹): 1620, 1453; ¹H NMR (300 MHz, CDCl₃, δ ppm): 7.24-7.89 (12H, m, Ar-H), 5.90 (2H, s, biphenyl CH₂), 4.15 (2H, s, CH₂), 2.15 (3H, s, CH₃); ¹³C NMR (75 MHz, CDCl₃, δ ppm): 163.60, 159.94, 139.50, 136.32, 135.79, 133.94, 132.69, 132.11, 131.03, 130.74, 129.00, 128.82, 128.62, 128.38, 127.76, 126.69, 126.39, 48.00, 38.03, 15.12; MS (m/z, 70 eV): 520 (M⁺+2), 518 (M⁺), 426, 379, 351, 249, 192, 165, 111, 85, 71; Analysis for C₂₄H₁₉N₆BrSO, Calculated: C 55.50, H 3.69, N 16.18. Found: C 55.59, H 3.76, N 16.24.

5 Pharmacological Evaluation

5.1 ACE Inhibition Assay

The compounds 5a-d/6a-d and 7a-d/8a-d were tested at three concentrations (viz., 1, 5, and 10 μg), dissolved in assay buffer [10 mM HEPES buffer containing NaCl (0.3 M) and zinc sulphate (10 μM) containing kidney cortex plasma membranes (20 μl, source of ACE) and Hippuryl-His-Leu (1 mM) as substrate. The compounds were incubated with the enzyme for 10 min at 37 °C. The substrate was then added and incubated for 45 min at 37 °C. The reaction was terminated by the addition of HCl (1 M). The yellow colour developed by the addition of pyridine (100 μl) and benzene sulphonylchloride (50 μl) was measured at 410 nm in ELISA Plate Reader (iMARK, BIORAD). Compounds with inhibitory potential block the substrate availability to the enzyme and thereby cause enzyme inhibition leading to no formation of yellow colour. The inhibition was represented in the form of percentage over control. Captopril, a known ACE inhibitor is used as the standard [19, 20].

Acknowledgments. The authors would like to thank the USIC authorities for their help in carrying out the spectral characterization (FT-IR, ¹H NMR, GC-MS) and NMR Research Centre, IISc, Bangalore for ¹³C NMR spectral analyses. We acknowledge the assistance of Biogenics Ltd., Hubballi, Karnataka, India for carrying out the pharmacological assays. The authors acknowledge UGC, New Delhi, Govt. of India for their financial assistance vide letter No. 37-248/2009 (SR) and DSA program vide No.F-540/2/DSA/2013 (SAP-I). One of the authors (GYM) thanks the UGC, New Delhi for Junior Research Fellowship.
